**Modified Aldehyde** with very good Pre-tanning & retanning properties

Nature	:	Modified Aldehyde with Functional Crosslinking group
Appearance	:	Clear Transparent to light brown liquid
pH	:	8.5 – 10.5
Solubility	:	Completely soluble in warm water

#### PROPERTIES

- SWAEKATAN MF a pre-tanning agent, which supports further tanning by wet white, chrome and vegetable tanning agents.
- SWAEKATAN MF helps to improve fineness of grain, without affecting the natural leather feel, touch and softness.
- SWAEKATAN MF is free from Free formaldehyde unlike the conventional pre-tanning agents, so helps to maintains excellent light fastness even on ageing.
- SWAEKATAN MF, due to its chemical nature, helps in the dispersion of Dye, Syntan, Fatliquors and so helps to improve the fullness into the leather.
- SWAEKATAN MF being amphoteric in nature, can be used in either stage of pre-tanning, tanning and retanning.

#### APPLICATIONS

- |  |   |                                   |
|--|---|-----------------------------------|
| - In Pre-tanning of Wet Blue                 | : | 2.0 - % 3.0% on Pelt weight       |
| - In Pre-tanning of Wet White                | : | 3.0 – 5.0% on pickled pelt weight |
| - In Pre-tanning of Vegetable tanned leather | : | 3.0 – 5.0% on pickled pelt weight |
| - In main Retanning                          | : | 3.0 – 6.0% on Shaved weight       |
